PROBLEM STATEMENT

Many users find it difficult to track and understand their spending due to unorganized financial records. Manual expense management is time-consuming and often leads to inaccurate budgeting. Without proper categorization, users cannot clearly identify where their money is being spent. This project develops an AI-powered expense categorization tool that automatically analyzes uploaded transaction data and classifies expenses into meaningful categories. The system also provides spending insights and visual reports to improve financial awareness and budgeting habits.

SOLUTION OVERVIEW

The Expense Categorization Tool uses AI to simplify financial tracking and expense analysis. Users can upload transaction data through CSV files or Google Sheets, and the system automatically categorizes expenses like food, travel, shopping, and utilities. The platform provides spending breakdowns, monthly insights, and visual charts for better understanding of expenses. By automating financial analysis, the tool helps users make smarter budgeting and financial management decisions.

KEY FUNCTIONALITIES

Data Upload

Allows users to upload financial transaction data using CSV files or Google Sheets.

Data Visualization

Displays expense patterns through charts and graphs for better financial understanding.

Automatic Expense Categorization

Automatically classifies transactions into categories like Food, Travel, Shopping, Bills, and Entertainment.

Spending Breakdown

Generates category-wise expense summaries to help users track overall spending.

Monthly Insights

Provides monthly spending analysis and smart insights to improve budgeting habits.
